AM Systems Integrations appointed as registered Wonderware SI

The goal of Wonderware's system integrator (SI) registration and certification programme is to improve the excellence of industrial process control and industrial IT implementations that use Wonderware solutions. Such an appointment is also one of the most important buying criteria for end users and one of the SI's key selling features for Wonderware-based implementations.

By being registered for Wonderware's System Platform and InTouch solutions, AM Systems Integrations has joined the swelling ranks of industrial solution providers focusing on Wonderware-based SCADA/HMI implementations in the food and beverage as well as the general manufacturing industries.

"Being a Wonderware-registered system integrator is important to us because not only do we now have access to the required knowledge for the professional implementation of Wonderware's SCADA/HMI solutions but it also gives our clients the peace of mind that they're in good hands," says company owner Michael-John Rautenbach. "But it also gives us the opportunity for partnering with our clients by providing them with service-level agreements so that their systems continue to meet their evolving process requirements."

According to Rautenbach, what appealed to them most about Wonderware solutions were the SCADA graphics, the ease with which field devices could be integrated into the implementation, SQL access facilities and the wide range of solutions available.

For more information on what AM Systems Integrations can do for you, contact Michael-John Rautenbach at michaelr@amsi.co.za
